THREATS TO STURGEON

Directions

Explore “Threats to Sturgeon” on the StoryMap and answer the following questions.

1. Do the red dots on the Trouble with Dams map appear in a random or linear pattern? Explain why you believe the dots appear in the pattern they do (in other words, why do the dots appear where they do?). (Hint: Zoom in to see what may also be near the red dots.)
2. What is the name of the dam that you found that has a hazard rating of “high” or “significant?”
3. How does the technology of a dam impact sturgeon?
4. How does the technology of a fish elevator impact sturgeon? (Listen carefully to the “Lake sturgeon take elevator to bypass a dam on the Menominee River” video to determine what other type of technology is actually used to transport sturgeon upriver.)
